Description
Find specific numbers, dates, and text in a list of products
See a dynamically changed number or text value in a list of products
Identify top, bottom, and above average values in a recent book tour report
Determine who are the top two students in the class
Find duplicate rows in a list of customers
Quickly see revenue status and trends from one quarter to the next
Compare different product criteria by using a rating scale
Examine profit trends from month to month
Identify regional sales below $900,000
Compare heights of the tallest mountains
Examine overall sales distributions in key product categories
Shade alternate rows in a range
Compare data in a cell outside the conditionally formatted range of cells
Shade an entire row where several criteria must be true
Shade an entire row if the row is a unique value

How to create this rule

Date	Product	Region	Amount
#########	Dairy	Denmark	$1,148.00
#########	Produce	Denmark	$1,530.00
#########	Produce	Denmark	$1,423.50
		Denmark Total	########
#########	Dairy	Finland	$192
#########	Dairy	Finland	$351
#########	Grain	Finland	$560.40
		Finland Total	########

#########	Dairy	Italy	$438
#########	Produce	Italy	$3,194.20
#########	Produce	Italy	$438
		Italy Total	########

Products1

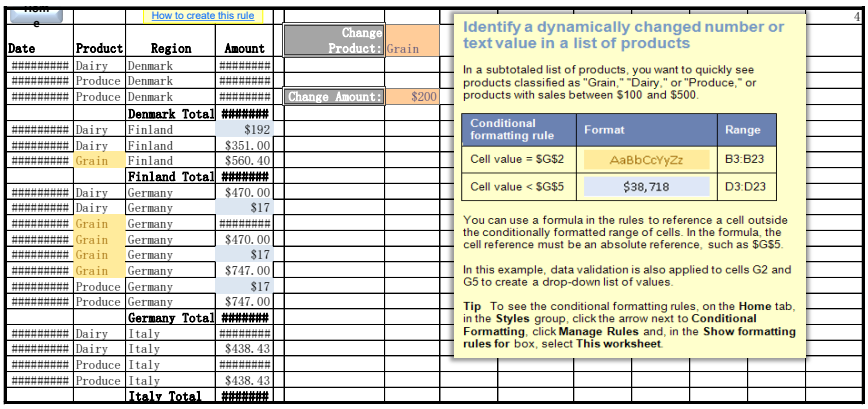

Identify specific numbers, dates, and text in a list of products

In a subtotaled list of products, you want to quickly see product sales for the current month, products classified as "Grain," or products with less than $500 in sales.

Conditional formatting rule	Format	Range
Current month	AaBbCcYyZz	A3:A23
Cell value contains "Grain"	AaBbCcYyZz	B3:B23
Cell value < 500	$38,718	D3:D23

Because the list is subtotaled, you don't want to filter or sort the data because doing so would change the way the data is displayed. Applying conditional formatting is useful in this case, because the formatting helps you see values based on criteria without having to rearrange the data.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Date	Product	Region	Amount
#########	Dairy	Denmark	########
#########	Produce	Denmark	########
#########	Produce	Denmark	########
		Denmark Total	########

How to create this rule

		(Top 20%)	(Above Average)	(Bottom 10)
City	Date	Fee	Attendance	Books Sold
Anchorage	15-Mar	$1,038	179	98
Atlanta	8-Feb	$1,880	149	95
Charleston	29-Jan	$1,822	328	124
Cleveland	10-Feb	$1,073	128	32
Detroit	14-Feb	$1,881	376	58
Flagstaff	25-Mar	$1,222	37	5
New Orleans	31-Mar	$1,233	415	59
New York	23-Jan	$1,180	205	147
Philadelphia	31-Jan	$1,965	145	31
Providence	2-Feb	$1,964	111	73
Salt Lake City	21-Mar	$1,190	275	37
Topeka	20-Feb	$1,775	66	12
Vancouver, B.C.	13-Mar	$1,740	69	59
Washington, D.C.	27-Jan	$1,724	499	151

Identify top, bottom, and above average values in a recent book tour report

In a list of results from your book tour, you want to identify and compare the top 20% cities visited for fees generated, the cities that were above in attendance, and the bottom 10 cities in number of books sold.

Conditional formatting rule	Format	Range
Top 20%	AaBbCcYyZz	C4:C25
Above average	AaBbCcYyZz	D4:D25
Bottom 10	AaBbCcYyZz	E4:E25

In general, use the **Format only top or bottom ranked values** and **Format values that are above and below average** rules to identify the highest and lowest values in a range. You can filter and sort the data without affecting the conditional formatting rules.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Find duplicate values in a list of customers

In a list of customers, you want to quickly identify duplicate values.

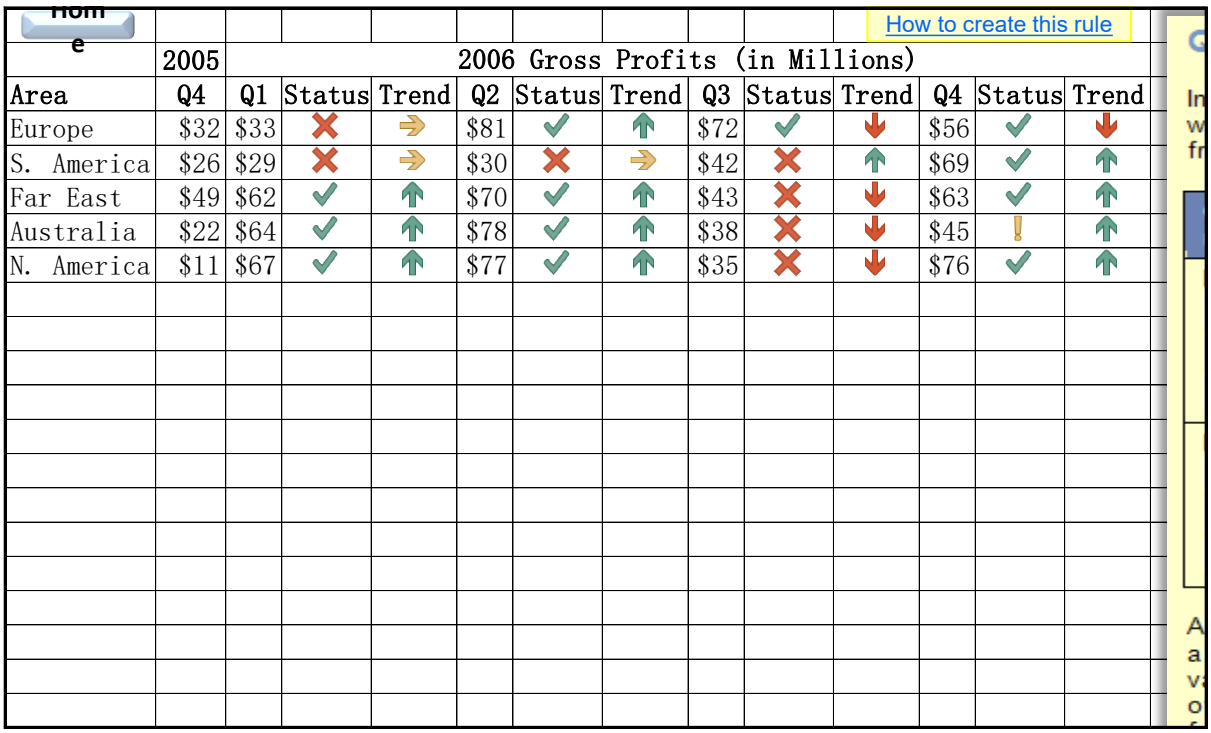

Conditional formatting rule	Format	Range
Duplicate values	AaBbCcYyZz	A3:A21

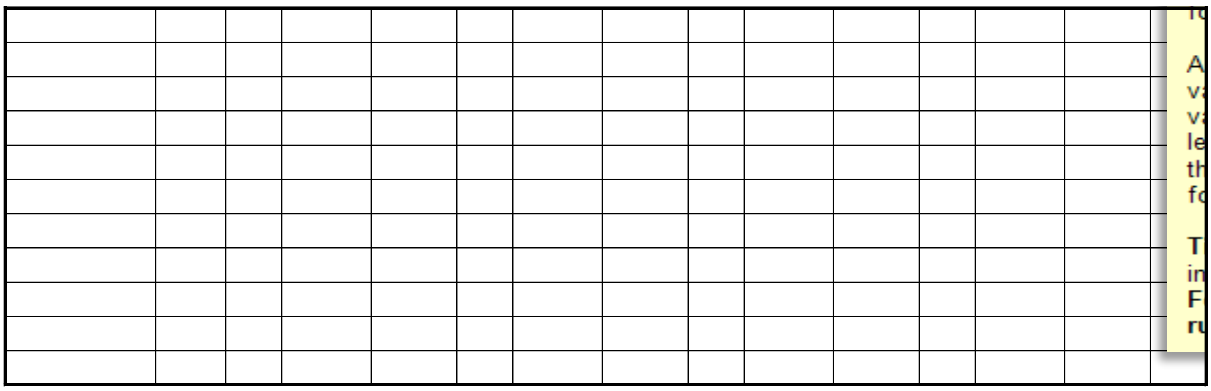

Use the **Format only unique or duplicate values rule** to visually identify how many unique or duplicate values exist in a range. In this case, only the customer's **Contact name** is conditionally formatted.

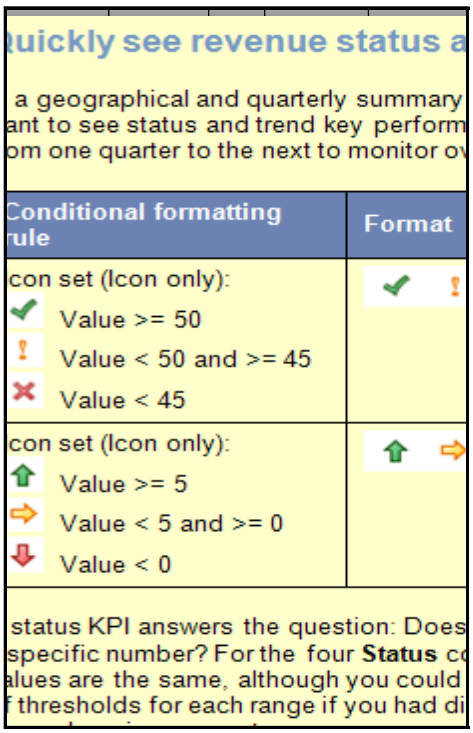

If you want to filter, copy, or remove duplicate values, you can change settings in the **Advanced Filter** or **Remove Duplicates** dialog boxes.

The **Customers2** example shows how to highlight the entire row by using a formula-based rule.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

March	$4,300	-$2,400
April	$11,000	$6,700
May	$12,500	$1,500
June	$9,800	-$2,700

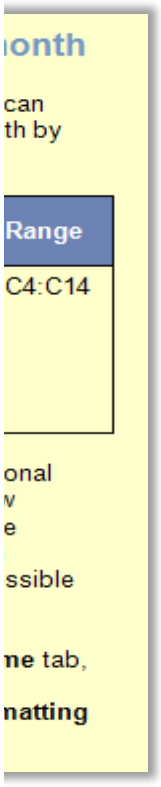

Examine profit trends from month to m

In a fiscal year summary of profits for each month, you
identify upward or downward trends from month to mon
using only two icons.

Conditional formatting rule	Format
Icon set: Value >= 0 Value < 0 and >=0 Value < 0	

The 3 Arrows (Colored) icon set is used, but the conditi
formatting rule is defined so that only the green up arrow
(positive or zero values) or the red down arrow (negative
numbers) can appear. The yellow arrow is never shown
because the conditional formatting rule applies an impos
condition to it (<0 and >=0 at the same time).

Tip To see the conditional formatting rules, on the **Hon**
in the **Styles** group, click the arrow next to **Conditional**
Formatting, click **Manage Rules** and, in the **Show form**
rules for box, select **This worksheet**.

How to create this rule

$900,000

Region	Sales
NorthWest	$1,781,345
West	$534,389
SouthWest	$1,009,268
South	$899,999
Central	$2,345,184
NorthEast	$900,000
East	$1,567,090
Territories	$34,678
Total	$9,071,953
	$9,071,953

Identify regional sales at or below $900,000

In a summary of regional sales, you want to see sales below $900,000 by using only one icon in the 3 Traffic Lights (Unrimmed) icon set.

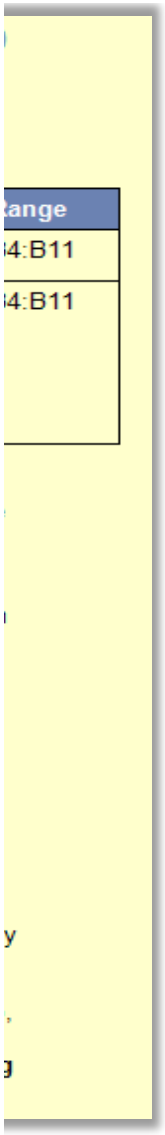

Conditional formatting rule	Format	R
Cell value >= 900000	No Format Set	B
Icon set: Value > 900000 Value <= 900000 and >= 0 Value < 0		B

How to do this:
Rule 1 Set the value opposite to what you want to trigger the icon; in this case, greater than or equal to $900,000, and set the format to **Automatic**. Then, select the **Stop If True** check box.
Rule 2 Set the format to the 3 Traffic Lights (Unrimmed) icon set so that only the yellow icon can show up.

How this works:
If rule 1 is true Excel applies the format, which is set to **Automatic** (black on white). Nothing changes in those cells visually. Then, Excel ignores rule 2 because the **Stop If True check box** is selected.
If rule 1 is false Excel evaluates rule 2:

- The yellow icon is applied if the value is <= $900,000.
- The green icon is never applied because rule 1 stops evaluating when > $900,000.
- The red icon is never applied because there are never any negative values.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Compare heights of the tallest mountains

In a list of the tallest mountains in the world, you want to compare heights in various ways by using data bars.

Conditional formatting rule	Format	Range
Lowest to highest		D3:D24
0 to 100 percent		E3:E24
20th to 80th percentile		F3:F24
20th to 80th percentile		G3:G24
0 to highest value		I3:I24

Default (Column D) Uses the default values, which includes the lowest (3,764) and highest (8,848) value in the range.
Percent (Column E) Uses a percentage, which refers to the percentage rank within the range of values (The lowest value is 0% and the highest value is 100%). Use a percent value when the distribution of values is proportional.
Percentile (Column F) Uses a percentile, which groups low values in the bottom percentile and high values in the top percentile. Use a percentile when outliers (extreme values) skew the data.
Bar only (Column G) This rule is the same as the one in column F, but only the data bar is shown. To make the bars the same length as column F, make the column widths the same.
Two column bar chart (Columns H, I) To simulate a bar chart, in column I, set the lowest value to **0** and the highest value to **High Value**.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Examine overall sales distributions in key product categories

In a summary list of product sales, examine the overall sales distributions in key product categories and for total sales by using a gradient color scale.

Conditional formatting rule	Format	Range
Graded two color scale		C3:F22
Graded three color scale		G3:G22

The first rule uses a two color scale to see how numbers vary in a large data set. Using two similar colors creates a visual display akin to a "heat map."

The second rule uses a three color scale with more distinctive colors to compare total sales.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Shade alternate rows in a range

In a long list of data, you want to shade alternate rows without applying a style.

Conditional formatting rule	Format	Range
=MOD(ROW(),2)=1	AaBbCcYyZz	A4:J25

This formula shades every other row in the range of cells a blue cell color with a top and bottom border line:

- The **MOD** function returns a remainder after a number (the first argument) is divided by the divisor (the second argument).
- The **ROW** function returns the current row number.
- When you divide the current row number by 2, you always get either a 0 remainder for an even number or a 1 remainder for an odd number.
- Because 0 is FALSE and 1 is TRUE, every odd numbered row is formatted with the shading.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

Compare data in a cell outside the conditionally formatted range of cells

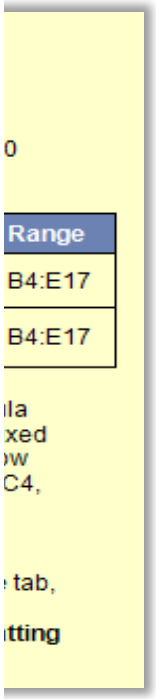

In a quarterly report summary, you want to find quarterly results that contribute 30 percent or more to the total, or 2(percent or less to the total.

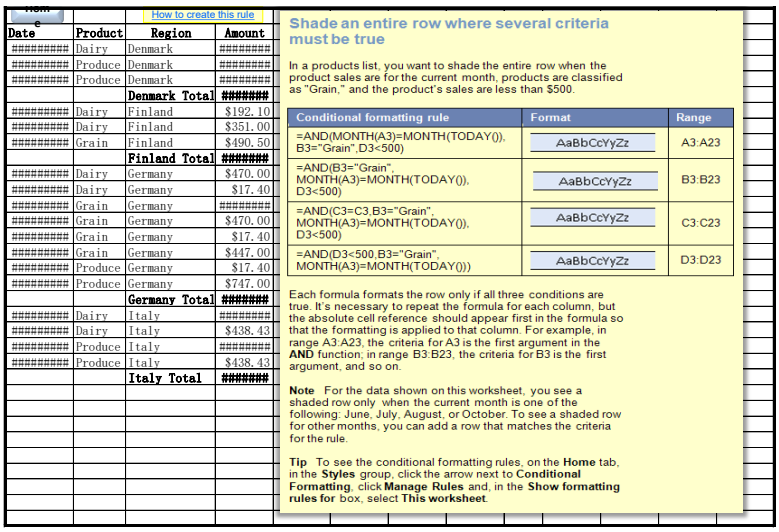

Conditional formatting rule	Format
=B4>=$F4*0.3	$38718
=B4<=$F4*0.2	($38718)

Each value in the range B4:E17 is evaluated by the formu because B4 is a relative reference. The formula uses a mi reference to refer to the corresponding total value in the ro outside the conditionally formatted range of cells. So, B4, C D4, and E4 are compared to $F4; B5, C5, D5, and E5 are compared to $F5; and so on.

Tip To see the conditional formatting rules, on the **Home** in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show forma rules for** box, select **This worksheet**.

Shade an entire row where several criteria must be true

In a products list, you want to shade the entire row when the product sales are for the current month, products are classified as "Grain," and the product's sales are less than $500.

Conditional formatting rule	Format	Range
=AND(MONTH(A3)=MONTH(TODAY()), B3="Grain",D3<500)	AaBbCcYyZz	A3:A23
=AND(B3="Grain", MONTH(A3)=MONTH(TODAY()), D3<500)	AaBbCcYyZz	B3:B23
=AND(C3=C3,B3="Grain", MONTH(A3)=MONTH(TODAY()), D3<500)	AaBbCcYyZz	C3:C23
=AND(D3<500,B3="Grain", MONTH(A3)=MONTH(TODAY()))	AaBbCcYyZz	D3:D23

Each formula formats the row only if all three conditions are true. It's necessary to repeat the formula for each column, but the absolute cell reference should appear first in the formula so that the formatting is applied to that column. For example, in range A3:A23, the criteria for A3 is the first argument in the **AND** function; in range B3:B23, the criteria for B3 is the first argument, and so on.

Note For the data shown on this worksheet, you see a shaded row only when the current month is one of the following: June, July, August, or October. To see a shaded row for other months, you can add a row that matches the criteria for the rule.

Tip To see the conditional formatting rules, on the **Home** tab, in the **Styles** group, click the arrow next to **Conditional Formatting**, click **Manage Rules** and, in the **Show formatting rules for** box, select **This worksheet**.

itional atting	Format	Range
)(A3:H3)	AaBbCcYyZz	A3:H20

example, two calculated columns, G and H, are added worksheet. Column G uses the new **COUNTIFS** function nt the number of duplicate values in columns A through returns the number of duplicate rows. Column H is used te a TRUE or FALSE condition: if the number of rows is r than 1, the condition is true (there is at least one ate row); otherwise it is false (there are no duplicate Then the entire condition is negated by using the **NOT** n to identify the unique rows.

nditional formatting rule formula checks the entire row ng the **AND** function. When the value in column H is the entire row is found to be unique and, therefore, the ow is formatted.

o see the conditional formatting rules, on the **Home** tab, **Styles** group, click the arrow next to **Conditional tting**, click **Manage Rules** and, in the **Show formatting or** box, select **This worksheet**.
