Balance Out Volumes Locked In for **SHADED** Production Weeks

Plant Operating Patterns:
4x10 - plant works four days a week, ten hours a day.
5x8 - plant works five days a week, eight hours a day.
3C - plant operates with three crews.
3S - plant operates with three shifts.
2S - plant operates with two shifts.
1S - plant operates with one shift.

Vehicle Schedule @ MPW: identifies weekly op plan schedules at the 1-all VO-supply MPW capacity for the specified vehicle line. When condition is present, the vehicle line name will apear in the target production week.

Shaded cells indicate weekly op plan schedules that exceed the 1-all VO-supply MPW capacity.

NOTE: 3-Crew OT pattern is typically reflected by a 30-hour weekend schedule in the POPS report. Saturday OT shifts are worked by the B-crew (afternoon shift) and Sunday OT shifts are worked by A-Crew (day shift). C-crew's normal 40-hr work week includes a 10-hr shift on Saturday and Sunday.
* Two month lead time after approved PO. Project requires downtime to complete. Alternative would require $50K funding per Super for accelerated E-Coat clean-out. (per GRL)

THIS DOCUMENT FOR REFERENCE ONLY. ALL PRODUCTION PLANNING SHOULD BE BASED UPON MATERIAL RELEASE REQUIREMENTS.

CUM Rollover (CRO) Function: The CRO Threshold determines how many units will hold in the next day's Schedule and Material Release due to a production loss at the plant. (NOTE: this applies to losses reported via DPR only. Losses reported via a Production Reduction/Shutdown Notice are processed differently).

Special consideration of plant bull-pen capabilities should be included whn setting the CRO threshold to minimize risk of stocking material at outside holding areas.

Each Op Plan analyst develops the CRO Threshold with input from the assembly plant. The CRO Threshold should reflect the plant's near-term makeup capability, based on current events within their schedule (IE: launch, balance out, open assembly/supply capacity). If managed correctly, the CRO Threshold minimizes the day-to-day manipulation of the Op Plan schedule.

The CRO Threshold tool supports material release stability and reduced inventory levels.
