Area Fill QA

Reviewing work being done by Rishabh for GSoC

Bitmap tab

- Style drop down list should be a listbox, so one click changing rather than two
- Add spacing above each heading label
-

Question for Team

- Should setting to Tiled reset width and height to 100%
- Should we allow typing in measurements into width and height fields, as old UI had measurements values when relative wasnt checked
- Separate import button in bitmap dialog that doesnt add image to preset list
- Default fill should be tiled - i'm against this patch https://gerrit.libreoffice.org/#/c/28115/
- Imported image should be stretched or filled

Pre-existing Bugs

- Importing an image with a filename that has spaces, causes the spaces to be replaced with '%20' in the name.
-
