Next, open the terminal window. Using the terminal window, run the "ifconfig -a" command to list all the interfaces on your system, as shown here.

```
# ifconfig -a

The ALFA wireless card is represented by the "wlan0" interface.

In addition to the interfaces shown in the ifconfig output, there is another interface known as the *wireless physical interface*. We can identify this interface by listing the contents of the /sys/class/ieee80211 directory, as shown.

```
# ls /sys/class/ieee80211/
phy0
```

The "phy0" interface is the parent interface used to create child interfaces. Note that if you unplug and replug the USB interface, the "phy" interface number will increment by one until you reboot your system.
