Balance Out Volumes Locked In for SHADED Production Weeks

Plant Operating Patterns:

4x10 - plant works four days a week, ten hours a day.
5x8 - plant works five days a week, eight hours a day.
3C - plant operates with three crews.
3S - plant operates with three shifts.
2S - plant operates with two shifts.
1S - plant operates with one shift.

Vehicle Schedule @ MPW: identifies weekly on plan schedules at the 1-all VO-supply MPW capacity for the specified vehicle line. When condition is present, the vehicle line name will appear in the target production week.

Shaded cells indicate weekly on plan schedules that exceed the 1-all VO-supply MPW capacity.

NOTE: 3-Crew OT pattern is typically reflected by a 30-hour weekend schedule in the POPS report. Saturday OT shifts are worked by the B-crew (afternoon shift) and Sunday OT shifts are worked by A-Crew (day shift). C-crew's normal 40-hr work week includes a 10-hr shift on Saturday and Sunday.

* Two month lead time after approved PO. Project requires downtime to complete. Alternative would require \$50K funding per Super for accelerated E-Coat clean-out. (per GRU)
