

This file was created in Microsoft Word 2010.

The first five lines use Kozuka Mincho Pro (Adobe)

The second five lines use Takao Mincho (free).

These rubies load and display properly in Microsoft Word 2010. If created in LibreOffice, the rubies are not properly spaced directly above the text. Also please note that LibreOffice does not display these rubies when they are loaded into LibreOffice! Rubies should be spaced *directly* above the text and we need an offset control to raise them higher if desired. I am sorry I took a look at the code and I do not know how to fix this ☹
