

Background

At present Barloworld make use of the MyMarket portal to procure Accommodation, Flights and Car Hire for the various business units within the organisation. Through the portal a relationship also exists with a Travel Management company, namely CWT, who charge a service fee for assisting with the booking of the above services.

Together with the current relationship, a new relationship for the Electronic Procurement (eProcurement) of goods and services from pre defined suppliers/vendors is being setup. This functionality will allow for users to electronically requisition the procurement of goods or services, obtain the necessary pricing from the portal, and then submit the requisition for electronic approval. Once approved a purchase order will electronically be submitted to the supplier/vendor, who will then supply the required goods or service.

The requirement has therefore been raised by the business to facilitate importing the relevant information supplied by MyMarket into Baan, to assist with the allocation of the expenses, and the payment of the various third parties involved with the delivery of the goods or services.

Proposed Solution for Travel

1. File Layout

The current file supplied by MyMarket will need to be modified to supply the following information:

Field	Description
Customer Name	Name of Barloworld Company
Debtor Number	Debtors Code with MyMarket
Passenger	Name of Barloworld Employee (Traveller)
Order Number	MyMarket Order Number
Third Party *	The End Supplier of the Goods
Account Allocation *	The Type of Purchase being undertaken, i.e. • Local Flight • International Flight • Local Car Hire • International Car Hire • Local Accommodation • International Accommodation • Service Fee • eProcurement
