

Introduction

This is an MS-Word 97 formatted document created using NeoOffice *v. 2.2.4 Patch 0*
(OpenOffice.org *v. 2.2.1*).

It is used to confirm that text replacement works even if Unicode characters (such as “—”
(U+2014), “兀” (U+2E8E), or “✓” (U+2714)) are present. Everybody should be thankful to the
\${organization} and all the POI contributors for their assistance in this matter.

Thank you, \${organization}!
