

Index	reference field		Author:	justin
	Page: 1		Time	07:58:47 AM
	style: 1		Date:	Thu 5 September 2013
	above/below: 见下方		Editing time:	17:19
	(intentionally using no references)			

Topic 1

Saving as a .doc file messes up the index. The text of the inserted field isn't visible in LibreOffice 4.1.1 or 4.0.0.3.

Topic 2

However, the document itself seems to be fine since Word can open it.

Topic 3

LibreOffice does show the tiny gray field box but not the text of the Cross-Reference - Heading reference. The "link" still works - and so does caption/tooltip

Topic 4

To recreate this

-Create several headings. Set their style to heading 1.

-create an index. Insert Fields Other Cross-Reference headings. Select your heading and insert reference to "Reference".

-save as ODT, DOCX and DOC and close

-reopen documents. In DOC format, you can't see the heading references, but can see page number and other fields. ODT and DOCX format have no problem. MSWord has no problem opening the DOC.

.i *Numbered headings* #1

reference to first heading: .i

reference to second heading: .ii

.ii *Numbered headings* #2

.iii *Numbered headings* #3

reference to third heading: .iii 1
